

*International Council for the Study of Viruses and Virus Diseases of Grapevine (ICVG)*

**BIBLIOGRAPHY ON GRAPEVINE VIRUSES, VIRUS AND VIRUS-LIKE DISEASES up to 1984(5).**

*This computerized bibliography was presented to the participants of the 11th meeting of the International Council for the Study of Viruses and Virus Diseases of Grapevine, Montreux, Switzerland, September 1993. It contains 1937 references from the beginning of grapevine virology to 1984(5).*

*The first 271 references are from the first Bibliography of ICSVG, "Bibliographie des viroses de la vigne des origines à 1965" prepared by A.Caudwell and published in 1965 by the Office International de la Vigne et du Vin (OIV), 11, rue Roquéepine, F-75008 Paris. It is now out of print. The references were entered into the database by R.Bovey. Some of them were completed and keywords added.*

*The next 254 references are from the second Bibliography of ICSVG, "Les viroses de la vigne, bibliographie de 1965-1970" prepared by A.Caudwell with the collaboration of W.B. Hewitt and R.Bovey, and published in Vitis 11, 303-324, 1972. The references were entered into the database by R.Bovey. Keywords and occasional notes were added.*

*An other 1412 references are from the 3rd and 4th Bibliographies of ICSVG "The viroses and virus-like diseases of the grapevine, a bibliographic report, 1971-1979", by W.B.Hewitt and R.Bovey, published in Vitis 18, 316-376, 1979, and "The viroses and virus-like diseases of the grapevine, a bibliographic report, 1979-1984, by R.Bovey and G.P.Martelli, published in Vitis 25, 227-275, 1986. The references were entered by Mrs Maja Gugerli and P.Gugerli. Keywords were added by R.Bovey.*

*The forth part of the bibliography distributed during the 11<sup>th</sup> Meeting of ICSVG in Montreux is now contained in the separate Bibliography 1995-1997.*

*This bibliography has been made with as much care as possible, but no such work can be free of mistake.*

Nyon, 25 February 2000, P. Gugerli

Bovey, R.(1973). Prevention and control of virus and mycoplasma-like diseases of the grapevine. *Riv.Patol.Veg.,Ser.IV* **9 (Suppl)**, 145-154.

**Keywords:** 1528/grapevine/virus diseases/virus-like diseases/yellows/mycoplasma-like organisms/control/Switzerland/review

**Notes:** Prevention and control of virus diseases of the grapevine can be obtained by visual selection, indexing and/or heat treatment, crop rotation and/or soil disinfection; that of Flavescence dorée by controlling the vector, and no control measure is known for Pierce's disease. A discussion is on the use of virus-tested material for viticulture.

Bovey, R. and Brugger, J.J.(1973). Stem pitting of grapevine in Switzerland. *Riv.Patol.Veg.,Ser.IV* **9(Suppl.)**, 37-42.

**Keywords:** 1534/grapevine/stem pitting/occurrence/symptoms/Switzerland

**Notes:** Stem pitting found on the rootstocks Kober 5 BB grafted with two old grapevine varieties previously grown on their own roots in Valais, {Switzerland}: Païen and Humagne. Mechanical inoculation to Chenopodium quinoa, serological tests and electron microscopy failed to detect fanleaf virus in diseased grapevines.

**Keywords:** 1539/grapevine/sanitary selection/methods/virus-free material/performance/Switzerland

Bovey, R.(1974). Virologia de la vid. a) Enfermedades de virus de la vid (Grapevine virology. a) Virus diseases of grapevine). *Segundas Jornadas Técnicas de Rioja, Vid y Vino, Haro-Logrono, 1972* 148-165.

**Keywords:** 1529/grapevine/virus-like diseases/virus diseases/fanleaf/leafroll/stem pitting/fleck/corky bark/flavescence dorée/economic importance/Switzerland

**Notes:** Description of the most important virus and virus-like diseases of the grapevine (fanleaf, leafroll, stem pitting, fleck, corky bark and Flavescence dorée), economic importance.

Bovey, R., Brugger, J.J., Simon, J., and Jaquinet, A.(1974). La sélection sanitaire de la vigne en Suisse romande (Sanitary selection of grapevine in the French speaking part of Switzerland). *Rev.Suisse Viticult.Arboricolt.Hort.* **6**, 77-83.

**Keywords:** 1536/grapevine/virus diseases/virus-like diseases/sanitary selection/heat therapy/indexing/Switzerland

**Notes:** Description of the most important virus diseases of the grapevine in Switzerland and of the methods of selection, indexing and heat treatment used for obtaining disease-free material.

Bovey, R.(1975). La sélection sanitaire de la vigne et ses conséquences pour la viticulture (Sanitary selection of grapevine and its consequences for viticulture). *Atti Accad.Ital.Vite e Vino Siena* **27**, 269-280.

**Keywords:** 1530/grapevine/virus diseases/virus-like diseases/sanitary selection/economic importance/Switzerland

**Notes:** Description of important virus diseases of the grapevine, and methods for obtaining disease-free material, with a discussion on the consequences of healthy material. Values of several years experimentation with heat treatment of the material before releasing on a large scale.

Bovey, R.(1975). Seleccion y certificacion de la vid en algunos paises (Selection and certification of grapevine in some countries). *VI Jornadas de estudio de la Asociacion Interprofesional para el Desarollo Agrario:La calidad del material vegetal en las plantas de vivero Zaragoza,2-4 Mayo 1974* 255-262.

**Keywords:** 1531/grapevine/sanitary selection/certification/review/Switzerland

**Notes:** A Spanish translation of a paper on the selection and certification of grapevine in California, France, West Germany, Switzerland, South Africa, Australia and Canada.

Bovey, R.(1975). *Maladies à virus et à mycoplasmes de la vigne (Virus and mycoplasma-like diseases of grapevine)*., Station Fédérale de Recherches Agronomiques de Changins, CH-1260 Nyon, Switzerland.

**Keywords:** 1532/grapevine/virus diseases/virus-like diseases/fanleaf/yellow mosaic/veinbanding/tomato black ring virus/raspberry ringspot virus/strawberry latent ringspot virus/tomato ringspot virus/tobacco ringspot virus/peach rosette mosaic virus/grapevine chrome mosaic virus/enation/tobacco necrosis virus/tomato bushy stunt virus/sowbane mosaic virus/tobacco mosaic virus/leafroll/grapevine infectious necrosis/stem pitting/yellow speckle/fleck/asteroid mosaic/corky bark/flavescence dorée/bois noir/Pierce's disease/selection/heat therapy/control/Switzerland

**Notes:** A mimeographed textbook written for students at the International Course of Viticulture jointly organized by the International Vine and Wine Office (OIV), the Centre international de hautes études agronomiques méditerranéennes (CIHEAM) and the Organization for Economic Cooperation and Development (OECD). It gives the essential knowledge on most of the known viruses and virus- diseases affecting the grapevine, and on the control measures.

Bovey, R. and Brugger, J.J.(1975). Le virus de la mosaïque de la luzerne sur la vigne (Alfalfa mosaic virus in grapevine). *Rev.Suisse Viticult.Arboricolt.Hort.* **7**, 63-65.

**Keywords:** 1535/grapevine/alfalfa mosaic virus/occurrence/serology/transmission/heat therapy/Switzerland

**Notes:** Alfalfa mosaic virus was detected by electron microscopy and by serology, in Chenopodium quinoa infected by mechanical inoculation from a grapevine with line pattern and ringspot symptoms in leaves. The virus can be eliminated from grapevine by heat treatment (37 days sufficient).

Bovey, R., Rochaix, M., and Simon, J.(1975). Résultats et perspectives d'avenir de la sélection sanitaire de la vigne (Results and future prospects of sanitary selection of grapevine). *Rev.Suisse Viticult.Arboricolt.Hort.* **7**, 161-166.

**Keywords:** 1540/grapevine/sanitary selection/virus-free material/performance/Switzerland

**Notes:** Selection and heat treatment of grapevine can eliminate most viruses. Selected and/ or

heat-treated material has greater vigour and productivity, with advantages and disadvantages: lower quality of the wine due to over-production, higher sensitivity to some diseases. Cultural and fertilization has to be adapted to increased vigour, and experimentation in field conditions is necessary before new material is released on a large scale.

Bovey, R. and Pelet, F.(1977). *Plant Health and Quarantine in International Transfer of Genetic Resources*. (Hewitt, W.B. and Chiarappa, L., Eds.) C.R.C.Press, Inc., Cleveland, Ohio, USA. 165-195.

**Keywords:** 1538/grapevine/virus diseases/virus-like diseases/mycoplasma-like organisms/review/Switzerland

**Notes:** A discussion of important contagious diseases of grapevine and fruit trees, including virus, virus-like, mycoplasma and rickettsia-like organisms, bacteria, and fungus, with tables on disease, cause, distribution, vectors, relative pathogenicity on grapevine and references.

Caudwell, A., Giannotti, J., Kuszala, C., and Larrue, J.(1971). Etude du rôle de particules de type "mycoplasme" dans l'étiologie de la Flavescence dorée de la vigne. Examen cytologique des plantes malades et des cicadelles infectieuses (Study of the role of mycoplasma-like particles in the etiology of flavescence dorée of grapevine. Cytological examination of diseased plants and of infectious leafhoppers). *Ann.Phytopathol.* **3**, 107-123.

**Keywords:** 1577/grapevine/flavescence dorée/mycoplasma-like organisms/etiology/ultrastructure/leafhopper/France

**Notes:** Des particules de type mycoplasme sont observées dans le liber des fèves inoculées par la Flavescence dorée et dans les cellules des vecteurs infectés. On ne les retrouve pas chez les fèves et les vecteurs sains témoins. Chez la vigne, les cellules libériennes apparaissent saines ou trop nécrosées. Les mycoplasmes n'ont pu être décelés que dans le cas de vignes inoculées artificiellement et qui ne montraient pas encore de symptômes.

Caudwell, A., Larrue, J., Kuszala, C., and Bachelier, J.(1971). Pluralité des jaunisses de la vigne (Plurality of grapevine yellows). *Ann.Phytopathol.* **3**, 95-105.

**Keywords:** 1588/grapevine/flavescence dorée/bois noir/etiology/comparison/symptoms/vectors/epidemiology/France

**Notes:** Le "bois noir" semble devoir être considéré comme différent de la Flavescence dorée {FD}, car le vecteur naturel de la FD, Scaphoïdeus littoralis, ne transmet pas le Bois noir. D'autre part, une jaunisse appelée "Ö"(Phi), voisine de l'aster yellows a pu être transmise à la vigne à l'aide de S. littoralis. Les symptômes obtenus sur la vigne sont voisins de ceux de la FD. La vigne réagit donc au moins à trois jaunisses, dont deux l'infectent naturellement. On peut conclure à la pluralité des jaunisses de la vigne.

Caudwell, A., Brun, P., Fleury, A., and Larrue, J.(1972). Les traitements ovicides contre la cicadelle vectrice, Scaphoideus littoralis (BALL.), leur intérêt dans la lutte contre la Flavescence dorée en Corse et dans les autres régions (Ovicidal sprays against Scaphoideus littoralis, vector of flavescence dorée and the interest of these sprays in controlling the disease in Corsica and other regions). *Vignes et Vins* **214**, 5-10.

**Keywords:** 1576/grapevine/flavescence dorée/vector/leafhopper/Scaphoideus littoralis/insecticide sprays/control/France

**Notes:** Destruction des vecteurs par un traitement ovicide à l'oléoparathion appliqué au moment du premier gonflement des bourgeons. Bonne efficacité.

**Keywords:** 1578/grapevine/virus diseases/virus-like diseases/bibliography/France/USA/Switzerland

**Notes:** 367 references listed, with an introduction of 9 pages in French and lists of references

concerning each virus disease or specific topics, such as heat therapy, insect vectors, nematode vectors,etc. These references are included in the second REFMAN data base of this floppy disk. The references anterior to 1965 were listed in a bibliography prepared by A. Caudwell and published by OIV in 1965. Unfortunately, this publication is now out of print. A selection of the most important references is recorded in the first REFMAN data base of this floppy disk.

Caudwell, A., Larrue, J., Kuszala, C., and Bachelier, J.(1972). Responsabilité d'un vecteur aérien dans l'épidémiologie du Bois noir de la vigne. Etude de l'existence de ceps sensibles et de ceps tolérants expliquant la permanence de la maladie sur les mêmes ceps (Involvement of an aerial vector in the epidemiology of bois noir (blackwood) of grapevine. Existence of sensitive and tolerant vines, which explains why the disease can persist on the same vines). *Ann.Phytopathol.*

**No. hors série**, 171-180.

**Keywords:** 1585/grapevine/bois noir/yellows/vector/epidemiology/France

**Notes:** L'usage de l'épreuve d'infectivité a permis de vérifier que les améliorations du milieu de survie permettent de passer de 2 à 100.000 unités infectieuses/ml. Il est certain que le Bois noir a été épidémique en 1946. Le comportement des jeunes plantations suggère qu'il y a, encore actuellement un vecteur aérien en Bourgogne. La permanence de la maladie, toujours sur les mêmes plants, suggère qu'il y aurait dans un même vignoble des ceps sensibles et des ceps tolérants. Les premiers seuls réagiraient aux réinoculations.

**Keywords:** 1400/grapevine/fanleaf/South Africa

Engelbrecht, D.J. and Wolfswinkel, L.D.(1967). Chenopodium as a host to viruses transmitted from apple, pear and grapevine. *S.Afr.J.Agric.Sci.* **10**, 419-428.

**Keywords:** Chenopodium/herbaceous hosts/virus/grapevine/South Africa

Engelbrecht, D.J.(1971). The significance of virus infection in table grape vineyards. *Deciduous Fruit Grower* **21**, 261-263.

**Keywords:** 1638/grapevine/virus diseases/virus-like diseases/economic importance/South Africa

**Notes:** Review of the economic importance of some virus diseases present in table grape cultivars, including grapevine leafroll, grapevine fanleaf and grapevine stem-grooving {legno riccio} and a discussion of the virus infection potential of the rootstock.

Engelbrecht, D.J. and Nel, A.C.(1971). A graft-transmissible stem-grooving of grapevines in the Western Cape Province (South Africa) resembling legno riccio (rugose wood). *Phytophylactica* **3**, 93-96.

**Keywords:** 1641/grapevine/stem grooving/stem pitting/rugose wood/South Africa

**Notes:** The presence of grapevine stem-grooving reported for the first time in South African vineyards. Grapevine fanleaf virus found not associated with the disease.

Engelbrecht, D.J.(1973). Effect of stem-grooving on yield of young "Queen of the Vineyard" table grapes (*Vitis vinifera* L.) grafted on tolerant rootstock. *Riv.Patol.Veg., Ser.IV* **9 (3)**, 235-242.

**Keywords:** 1639/grapevine/stem grooving/stem pitting/rugose wood/symptoms/economic importance/South Africa

**Notes:** Grapevine stem-grooving was found to significantly decrease the average yield, over the first 3 years of production, of a Queen of the Vineyard clonal selection trial. Disease symptoms were only observed on the scion.

Engelbrecht, D.J.(1978). Nature and effect of the breakdown in tolerance of Jacquez rootstock to grapevine stem-grooving in grafted *Vitis vinifera* L. CV. Queen of the Vineyard vines. *Proc.6th meeting ICVG,Cordoba,Monografias INIA No 18,Ministerio de Agricult.,Madrid* 171-178.

**Keywords:** 1640/grapevine/stem grooving/stem pitting/rugose wood/symptoms/economic importance/growth/yield/South Africa

**Notes:** Clonal selection trial showed a progressive increase of grapevine stem-grooving infection in the scion and rootstock over a 3 year period. A variable latent period is suggested to explain the progressive decline in view of the lack of evidence of spread through the soil. Significant decreases in yield and growth with increased severity were recorded.

*Riv.Patol.Veg.,Ser.IV* **9(3)**, 251-252.

**Keywords:** 1720/grapevine/enation/France

**Notes:** Des symptômes d'énation ont été observés dans des vignobles de l'Aude sur plusieurs

cépages. Le greffage-indexage en vert sur Rupestris du Lot a induit dans un cas des symptômes de marbrure et dans un autre cas des "ringspots".

Hévin, M., Leclair, P., and Rives, M.(1973). Green-grafting as a quick and secure method for graft-indexing viruses in the grapevine. *Riv.Patol.Veg.,Ser.IV* **9** {3}, 277-278.

**Keywords:** 1721

**Notes:** La technique de greffage en vert utilisée avec succès à Bordeaux est décrite. Elle permet l'apparition des symptômes de marbrure et de fanleaf sur Rupestris du Lot 20 à 30 jours après le greffage. Dans le cas de l'enroulement, les symptômes sur l'indicateur Merlot apparaissent à l'automne de l'année même du greffage

Hévin, M., Ottenwaelter, M.M., Doazan, J.P., and Rives, M.(1973). Investigating the transmission of marbrure and fanleaf through the seed in the grapevine. *Riv.Patol.Veg.,Ser.IV* **9(3)**, 253-258.

**Keywords:** 1724/grapevine/fleck/fanleaf virus/seed transmission/research results/France

**Notes:** Des pépins récoltés en fécondation libre sur des souches de 4 cépages, reconnues porteuses de marbrure ou de court-noué, ont été semés et 145 descendants ont été indexés par greffage avec Rupestris du Lot. Aucun d'eux ne s'étant révélé virosé, on conclut à la non-transmission de ces deux viroses par la graine.

Hévin, M., Moutous, G., and Fos, A.(1978). Transmission de la Flavescence dorée par greffage en vert et présence du "corky bark" sur un cépage corse {Nielluccio}. *Scaphoideus littoralis* BALL., vecteur possible de cette maladie (Transmission of flavescence dorés by green grafting and presence of corky bark in a Corsican cultivar (Nielluccio). *Scaphoideus littoralis* as a possible vector of corky bark. *Connaiss.Vigne et Vin* **12**, 79-86.

**Keywords:** 1722/grapevine/flavescence dorée/corky bark/transmission/green grafting/*Scaphoideus littoralis*/vector/leafhopper/France

**Notes:** From vines showing atypical symptoms of Flavescence dorée, a disease has been transmitted to the indicator LN 33, giving symptoms similar to those of corky bark. Experiments for testing the transmissibility of corky bark by *Scaphoideus littoralis* are under way.

Hévin, M., Moutous, G., Fos, A., and Rives, M.(1978). La transmission de la Flavescence dorée par la greffe en vert est facile et suggère que cette maladie est distincte du corky bark (Transmission of flavescence dorés by green grafting is easy, suggesting that this disease is distinct from corky bark). *Proc.6th meeting ICVG,Cordoba,Monografias INIA No 18,Ministerio de Agricult.,Madrid* 227-229.

Milkus, B.N.(1978). Mycoplasma diseases of grapevine in Ukraina. *4th Internat.Congr.Virol., The Hague (Netherlands)* 176-Abstract

**Keywords:** 1853/grapevine/vein necrosis/fleck/mycoplasma-like organisms/chlamidia-like organisms/associated/etiology/ultrastructure/Ukraine

**Notes:** Fleck or marbrure ("marbour") and vein necrosis of grapevine are commonly found in Ukraine. Microorganisms identified as members of the PLT group (Chlamidia, Bedsonia) have been found in phloem sieve cells of grapevines affected by fleck, while typical mycoplasms were found in phloem parenchyma cells of grapevines affected by vein necrosis.

Milkus, B.N. and Kalaschyan, J.A.(1978). Mycoplasma-like bodies in phloem tissue of grapevine affected by vein necrosis. (In Russian). *Izv.Akad.Nauk.Moldav.SSR,Ser.Biol.i Chim.Nauk.* **1**, 19-30.

leafroll and corky bark in South African wine grape vineyards. Less than 1% of the vines tested were free from one or more of the diseases, Indexing on LN 33 and Rupestris St. George showed the widespread distribution of fleck, leafroll and corky bark in South African wine grape vineyards. Less than 1% of the vines tested were free from one or more of the diseases

**Notes:** An article of information for the grower on recognition of degeneration problems in vineyards and orchards (peaches), methods of soil treatment and replanting.

Ramsdell, D.C.(1977). Detection of peach rosette mosaic virus (PRMV) in "Concord" grape: comparison of ELISA vs. Chenopodium quinoa indexing. *Proc.Amer.Phytopathol.Soc.* **4**, 91-(Abstract)

**Keywords:** 2180/grapevine/peach rosette mosaic virus/ELISA/indexing/Chenopodium/comparison/USA

Ramsdell, D.C. and Myers, R.L.(1978). Epidemiology of peach rosette mosaic virus in a Concord grape vineyard. *Phytopathology* **68**, 447-450.

**Keywords:** 1943/grapevine/peach rosette mosaic virus/epidemiology/Michigan/USA

**Notes:** The spread of PRMV is slow and mostly to vines adjacent to previously infected vines. Indexing the roots of 16 weed species associated with diseased vines revealed that Curly Dock (*Rumex crispus*), Carolina Horsenettle (*Solanum caliginosum*) and common dandelion (*Taraxacum officinale*) were infected. The virus was found to be seedborne in 3.6% of the dandelion seedlings, and 9.5% of grapevine seedlings from infected plants.

Ramsdell, D.C. and Myers, R.L.(1978). The rate of spread of peach rosette mosaic virus in a *Vitis labrusca* L. "Concord" vineyard; some weed hosts and the seed- and pollen-borne nature of the virus. *Proc.6th meeting ICVG,Cordoba,Monografias INIA No 18,Ministerio de Agricult.,Madrid* 77-82.

**Keywords:** 1944/grapevine/peach rosette mosaic virus/nematode/vector/Xiphinema americanum/spread/epidemiology/seed transmission/pollen/Michigan/USA

**Notes:** In addition to grapevines the virus found also in weed hosts; *X. americanum* found as deep as 1.5 m, populations given.

Ramsdell, D.C., Andrews, R.W., Gillett, J.M., and Morris, C.E.(1979). A comparison between enzyme-linked immunosorbent assay (ELISA) and Chenopodium quinoa for detection of peach rosette mosaic virus in 'Concord' grapevines. *Plant.Dis.Reptr.* **63**, 74-78.

**Keywords:** 2632/grapevine/peach rosette mosaic virus/detection/indexing/Chenopodium/serology/ELISA/comparison/Michigan/USA

Ramsdell, D.C. and Stace-Smith, R.(1980). A serological and physio-chemical comparison between blueberry leaf mottle virus and grapevine Bulgarian latent virus. *Proc.7th Meeting ICVG,Niagara Falls (Canada Agriculture,Research Branch)*. 119-129.

**Keywords:** 2636/grapevine/Bulgarian latent virus/blueberry leaf mottle virus/serology/properties/comparison/Michigan/USA

**Notes:** Blueberry leaf mottle virus (including the NY isolate found in grapevine in New York by Uyemoto et al.,1977) is serologically related with Bulgarian latent virus found in Europe. However the two virus should be considered as distinct entities. BBLMV could be dangerous for grapevine.

Ramsdell, D.C. and Stace-Smith, R.(1980). Blueberry leaf mottle, a new disease of highbush blueberry. *Acta Horticulturae* **(95)**, 37-38.

**Keywords:** 2637/grapevine/blueberry leaf mottle virus/Bulgarian latent virus/serology/comparison/Michigan/USA

**Notes:** BLMV is distantly related to GBLV, but it has no serological relationship with TomRSV. It can infect grapevine.

Ramsdell, D.C. and Gillett, J.M.(1981). Peach rosette mosaic virus in highbush blueberry. *Plant Dis.* **65**, 757-758.

**Keywords:** 2634/grapevine/peach rosette mosaic virus/blueberry/indexing/Michigan/USA

**Notes:** PRMV can infect blueberry (*Vaccinium corymbosum* L.). The virus can be transmitted from infected grapevines growing in the vicinity.

Ramsdell, D.C. and Stace-Smith, R.(1981). Physical and chemical properties of the particles and ribonucleic acid of blueberry leaf mottle virus. *Phytopathology* **71**, 468-472.

**Keywords:** 2638/grapevine/blueberry leaf mottle virus/isometric particles/nucleic acid/properties/Michigan/USA

Ramsdell, D.C., Bird, G.W., Gillett, J.M., and Rose, L.M.(1983). Superimposed shallow and deep soil fumigation to control *Xiphinema americanum* and peach rosette mosaic virus reinfection in a 'Concord' vineyard. *Plant Dis.* **67**, 625-627.

**Keywords:** 2633/grapevine/peach rosette mosaic virus/*Xiphinema americanum*/soil disinfection/control/Michigan/USA

**Notes:** Superimposed shallow plus deep fumigant application 20 and 90 cm in vineyard soil from which vines uniformly infected with peach rosette mosaic virus had been removed the previous year reduced population of *X. americanum* to zero or near zero in the top 180 cm of the soil for 6 years. Virus-free Concord grapes planted in the variously treated "shallow and deep" plots remained free of infection by PRMV for 6 years, whereas reinfections occurred in control plots.

Ramsdell, D.C. and Gillett, J.M.(1985). Relative susceptibility of American, French hybrids and European grape cultivars to infection by peach rosette mosaic virus. *Proc. 8th Meeting ICVG, Bari. Phytopathol. Mediter.* **24**, 41-43.

Stellmach, G.(1972). Die infektiöse Rollkrankheit im Hinblick auf Selektion und Erhaltungszüchtung von Rebenklonen. *Dt. Weinbau* **27**, 598

**Keywords:** 2023/grapevine/leafroll/spread/Germany

**Notes:** There is no evidence for natural spread of leafroll in Germany. The fact that some rootstock varieties are symptomless carriers of leafroll has led to difficulties in clonal selection. With many varieties in which symptoms are obscure or lacking, only an indexing program will assure disease-free stocks.

Stellmach, G.(1972). Wie ist die Zuverlässigkeit des Indexing zu erhöhen ? (How to improve the efficiency of indexing ?). *Ann. Phytopathol. No. hors série*, 79-84.

**Keywords:** 2024/grapevine/indexing/graft transmission/methods/Germany

**Notes:** The author proposes to improve the efficiency of indexing by using approach-graft and mist propagation. Indexing and propagation of the healthy material are carried out simultaneously.

Stellmach, G. and Weischer, B.(1972). Fremdartig erkrankte Reben, aus denen ein saftübertragbares Virus isoliert wurde. (A sap transmissible virus isolated from a grapevine with peculiar symptoms). *Ann. Phytopathol. No. hors série*, 147-154.

**Keywords:** 2040/grapevine/virus diseases/mechanical transmission/herbaceous hosts/Germany

**Notes:** Description of the disease (interveinal chlorosis followed by yellowing and burning, symptoms on FS 4 severe) and associated nematodes given.

Stellmach, G.(1973). Sanitäre Probleme beim Anbau von Rebensorten, die gegenüber bodenbürtigen Viruskrankheiten tolerant sind. *Dt. Weinbau-Jahrb.* **24**, 87-93.

**Keywords:** 2025/grapevine/nepoviruses/latent/Germany

**Notes:** A discussion of effects of latent viruses on visual selection and problems that would result from breeding virus tolerant grapevines.

Uyemoto, J.K., Cummins, J.R., and Abawi, G.S.(1977). Virus and virus-like diseases affecting grapevines in New York vineyards. *Amer.J.Enol.Viticult.* **28**, 131-136.

**Keywords:** 2086/grapevine/decline/tobacco ringspot virus/tomato ringspot virus/yellows/New York/USA

**Notes:** 3 major types of diseases affecting grapevines in New York vineyards:1. Virus-induced grapevine decline disease, caused by tomato and tobacco ringspot viruses, which are both transmitted by Xiphinema americanum. Symptoms are decline, chlorotic mottling and ringspot on the leaves, short internodes, little or no fruit. Most affected are Baco noir, Cascade, Chelois, DeChaunac, White Riesling, Pinot Chardonnay, Pinot blanc. Aurore seems to be tolerant. Mechanical transmission of purified virus on grapevine produces systemic infection in White Riesling and necrotic lesions in Concord, Aurore and 3309. Necrotic tissue produces symptoms on C. quinoa following mechanical inoculation, but adjacent healthy tissue do not. Hypersensitivity reaction. TRSV and TomRSV can infect weeds (Plantago). 2. grapevine dead arm disease caused by the fungus Eutypa armeniacae. 3. Grapevine leaf curl and berry shrivel disease, whose etiology is not known. The symptoms of the third disease mentioned are somewhat similar to those of Flavescence dorée.

Uyemoto, J.K., Taschenberg, E.F., and Hummer, D.H.(1977). Isolation and identification of a strain of grapevine Bulgarian latent virus in Concord grapevine in New York State. *Plant Dis.Repr.* **61**, 949-953.

**Keywords:** 2090/grapevine/Bulgarian latent virus/occurrence/New York/USA

**Notes:** Given are symptoms, methods of identification and a note on being seed-borne in grape and C.quinoa (This virus was later shown to be a strain of Blueberry leaf mottle virus, which is serologically distantly related with GBLV).
